

■ Construction(mm)

Be custom products available if required

■ Features

- Excellent stainless hardware as frame
- The maximum of power will bear hundreds KW after resistor assembled
- The terminals and the resistance body use the resistance welding flow process, no contact resistance, avoiding crack when extreme high current
- The surface temperature does not exceed 350°C when continuous operation
- Modularization assembled, series connection or parallel connection available if required, suitable for all kinds of parameter requirements, replace conveniently

■ Reference Standards

Q/ATK 075

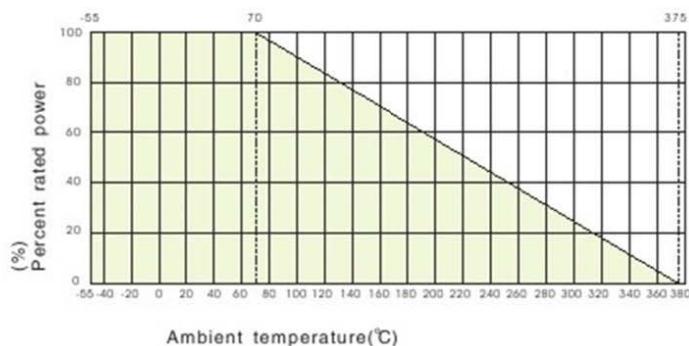

■ Applications

- Used in braking release electric circuit of large-scale electrical motor
- Start-stop circuit in large-scale electricity
- Locomotive braking device
- Solar energy or windpower equipments
- Power aging load test

■ Resistance and power range

resistance: 1Ω~20Ω
power: 1KW~200KW

■ Derating Curve

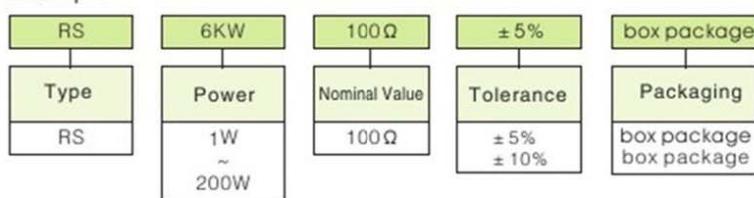

■ Performance

Test Item	Specifications	Test Methods
Temperature coefficient	$\Delta R \leq \pm 5\%$	70°C~375°C
Terminal tensile strength	$\Delta R \leq \pm (2\%R + 0.05\Omega)$	100N, 30S
Thermal shock	$\Delta R \leq \pm (2\%R + 0.05\Omega)$	P_{th} , 30mm/-55°C, 15min
Overload	$\Delta R \leq \pm (2\%R + 0.05\Omega)$	10P _{th} , 5S
Temperature rise	$\leq 375^\circ\text{C}$	P _{th}
